

# Sensor Part Numbering System

This document is designed to assist with understanding the Electrolab Part Numbering System or SKU. The example below shows the part number for a Digital Level Sensor (DLS) 16-foot stainless sensor with 1/4-inch resolution, one temperature sensor, and two floats with the HLS option and no housing.

\*When selecting the sensor length this should be the actual height of the tank. The sensor will be 18" longer. When installing in a dome-top tank, order a sensor that is 1 foot longer than the height of the tank to accommodate the extra height the dome adds.
